

Boltonia asteroides

'Pink Beauty'

Boltonia (bowl-tone-e-a)
 Named for naturalist James Bolton (1750-1799).
asteroides (as-tur-oide-ees)
 meaning resembling Aster

Zones: 5 - 8 **Flower Color:** Pink **Height:** 3 - 5' **Spacing:** 18"

'Pink Beauty' has a multitude of soft pink 1" daisies that are carried like a cloud on 3-5' stems that will spread to 4' wide. The first flowers open in August with gray-green foliage that never gets mildew, and looks marvelous among dark green evergreens by itself, or paired with 'Snowbank'. Great cut flower.

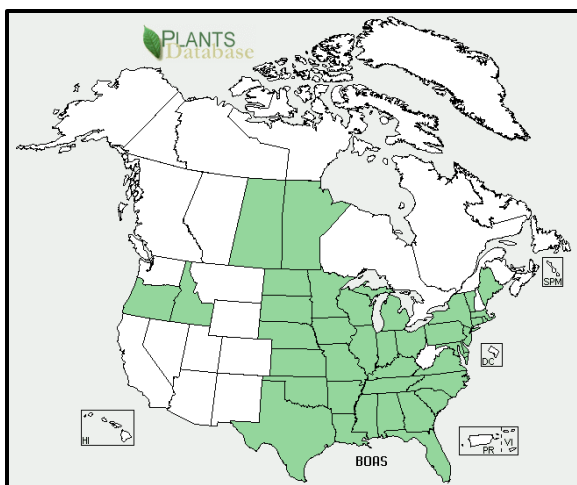

About the Species:

Common Name: White Doll's Daisy

Family: Asteraceae

Habitat: Found in wet prairies, wet meadows, and stream banks in the throughout the eastern United States.

In the Garden: Use in naturalized areas, cottage gardens or native plant gardens.

Boltonia asteroides

'Snowbank'

Boltonia (bowl-tone-e-a)
 Named for naturalist James Bolton (1750-1799).
asteroides (as-tur-oide-ees)
 meaning resembling Aster

Zones: 4 - 8 **Flower Color:** White **Height:** 3 - 4' **Spacing:** 18"

'Snowbank', starting in early September, is a shower of tiny white daisies on 3-4' stalks that rarely need staking. The flowers withstand light frosts that make them effective in Maryland and into October. An easy-to-grow graceful perennial, it prefers a light soil and full sun, looks great at the back of the border, in the wildflower garden, or as a most unusual fall-flowering hedge. Try it with purple or blue 'Wood's' *Asters*.
